DETAILED ACTION

Receipt is acknowledged of an amendment, filed 12/28/2005, in which claims 1, 3-9 and 11-20 were canceled; and claims 2 and 10 were amended. Claims 2 and 10 are currently pending and under consideration.

Any rejection of record in the previous office actions not addressed herein is withdrawn. New grounds of rejection are presented herein that were not necessitated by applicant's amendment of the claims since the office action mailed 8/26/2005. Therefore, this action is not final.

The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.

Response to Arguments - 35 USC § 112

The rejection of claim 4 under 35 U.S.C. 112, first paragraph, has been withdrawn in view of Applicant's amendment to the claims filed 12/28/2005.

Response to Arguments - 35 USC § 103

The rejection of claims 1 and 10 under 35 U.S.C. 103(a) as being unpatentable over Barsky et al in view of Crook et al has been withdrawn in view of Applicant's amendment to the claims filed 12/28/2005. The claims have been amended to recite "normal human bladder epithelial cells."

Claim Rejections - 35 USC § 102

Claims 2 and 10 are rejected under 35 U.S.C. 102(b) as being anticipated by Logothetou-Rella et al (European Urology, Vol. 15, pages 259-263, 1988; see the entire reference). This is a new rejection.

Claim 2 is drawn to a method of culturing normal human bladder epithelial cells, comprising plating a confluent monolayer of non-proliferating epithelial cells and normal human bladder epithelial cells in a medium on a culture support. Normal human bladder epithelial cells are epithelial cells. Thus, the claim reads on a population of cultured normal human bladder epithelial cells that contains non-proliferating epithelial cells (e.g. senescent cells). Claim 10 is drawn to a culture produced by the method of claim 2.

Logothetou-Rella et al teach a method of culturing normal human bladder epithelial cells, comprising plating a confluent monolayer of human bladder epithelial cells in medium on a culture support and incubating the plated cells under conditions to allow the normal human bladder cells to proliferate, and a culture produced by said method (e.g. pages 259-260, Materials and Methods). The culture of Logothetou-Rella et al will necessarily contain non-proliferating human bladder epithelial cells as some cells stop dividing due to contact inhibition or senescence (e.g. page 260, left column, first paragraph and right column, Growth Characteristics and Cytology; paragraph bridging pages 262-263).

Therefore, claims 2 and 10 read on the teachings of Logothetou-Rella et al.

Conclusion

No claims are allowed.

Patent applicants with problems or questions regarding electronic images that can be viewed in the Patent Application Information Retrieval system (PAIR, http://pair-direct.uspto.gov) can now contact the USPTO's Patent Electronic Business Center (Patent EBC) for assistance. Representatives are available to answer your questions daily from 6 am to midnight (EST). The toll free number is (866) 217-9197. When calling please have your application serial or patent number, the type of document you are having an image problem with, the number of pages and the specific nature of the problem. The Patent Electronic Business Center will notify applicants of the resolution of the problem within 5-7 business days. Applicants can also check PAIR to confirm that the problem has been corrected. The USPTO's Patent Electronic Business Center is a complete service center supporting all patent business on the Internet. The USPTO's PAIR system provides Internet-based access to patent application status and history information. It also enables applicants to view the scanned images of their own application file folder(s) as well as general patent information available to the public.
